

TREAT WELLNESS ACADEMY

***A bridge between academic knowledge and clinical excellence.
A cornerstone of evidence-based, personalized, root-cause medicine.***

Spearheaded by Dr. Kathleen O'Neil, a magna cum laude graduate of Boston University Medical School and a Harvard-trained internist, Treat Wellness Academy is at the forefront of regenerative and functional medicine. Dr. O'Neil is a globally renowned key opinion leader with expertise in bioidentical hormone therapy, sports medicine, longevity, precision medicine, and nutrition. With over 15 years of experience, she is celebrated as a trailblazer in health and longevity. "What my Ivy League medical education never taught me – but today's patients need me to know. "

Why This Course Matters

Today's greatest health threats—obesity, chronic inflammation (inflammaging), and autoimmune disease—require more than conventional solutions. Immune system aging is now one of the most reliable predictors of longevity and quality of life. With recent breakthroughs in epigenetics and medicinal signaling therapies (MSTs), clinicians have new tools to address root causes and personalize patient care more than ever before.

This is the advanced, practice-changing training your traditional education never provided.

Course Highlights

What You'll Learn:

Gain the clinical and business knowledge necessary to elevate your practice with regenerative and functional medicine:

- When and how to monitor biomarkers—and why they're not enough on their own
- How to stay ahead of rapidly evolving therapies
- How to source pharmaceutical-grade treatments that safeguard your license
- How to assess ROI using clinical and financial metrics
- Which peptides Dr. O'Neil uses—and how to stack them with other regenerative therapies

Learning Objectives

1. Making accurate diagnoses and identifying root causes
2. Interpreting labs and radiologic diagnostics
3. Preparing for procedures (consent forms, patient prep, follow-up)
4. Live training using:
 - IV nutrients
 - Antioxidants
 - PRP/PRF
 - Peptides
 - Exosomes (EVs)
 - Wharton's Jelly (WJ)
5. Administering injections for joints and soft tissue
6. Aligning clinical excellence with business sustainability

Bonus: The Science of Food

Treat Wellness Academy is proud to collaborate with UNESCO-awarded Italian chef Marisa Iocco to bring the principles of culinary medicine into clinical application.

Learn how food can be leveraged as an accessible, sustainable therapeutic tool—guided by science and rooted in tradition.
